

Seaside School District 10

Code: **EBBAA/GBEBC/JHCCC**
Adopted: 7/26/07

Infection Control - HIV, AIDS, HBV, HCV

The District will use universally recognized precautions at all times for infection control. Each staff member or student is to approach infection control as if all direct contact with human blood and body fluids is known to be infectious for HIV, HBV or other bloodborne pathogens. Each person is therefore treated as though an HIV or HBV¹ and HCV infection exists.

The District shall develop an Exposure Control Plan that includes infection control procedures for all staff and students.

Staff and students shall receive an annual in-service that includes correct procedures for cleaning up body fluid spills and for personal cleanup, appropriate disposal, immunization and personal hygiene, as well as the location and a content review of first aid and clean-up kits. Blood spill clean up kits shall be available for each room in the building and in each District vehicle.

Students will receive HIV, AIDS, and HBV information annually.

The information shall emphasize how infection is spread as well as how it is not spread.

The District will cooperate with the local health department in delivering HIV, AIDS, and HBV education.
